cause of death--as well as suggests that any who be- youths are diptheria YOUR CHILD'S BREATHING

Croup is one of the symptoms of a throat problem. Breathing is difficult and there may be a spasm of the larynx with a wheezing sound. It may occur in acute laryngitis, a streptococcus sore throat or even diphtheria.

It is important to call a physician. While waiting, start a steam vaporizer near your child. Until the vaporizer begins to steam, turn on the hot water in the bathroom and expose your child to the steam there. For steam usually brings some quick relief. YOUR DOCTOR CAN PHONE US when you need a medicine. Pick up your prescription if shopping nearby, or we will deliver promptly without extra charge. A great many people en-

ARE YOUR NOSE DROPS

CONTAMINATED? Nose drops are helpful in the treatment of adults and children. Most physicians prescribe them. When you get them from your pharmacy they are pure and potent. But as soon as you take out and use the dropper, it is exposed to virulent germs which may enter the bottle, multiply and cause a severe infection. Removal of the protective cap of the spray bottles permits these germs to collect at the top to infect you. To avoid this, cleanse the dropper and top of the bottle with alcohol before replacing it. Examine partly used nose drops and if the contents become cloudy, or a sediment develops, don't use them. It may be dangerous. He was graduated from

attended West High School.
